DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 218-220, 224, 287, and 344 are rejected under 35 U.S.C. 102(b) as being anticipated by Gould.
- 3. Claims 220 and 240 are rejected under 35 U.S.C. 102(b) as being anticipated by Smith.
- 4. Claims 220, 243, 276, and 341 are rejected under 35 U.S.C. 102(b) as being anticipated by MacKirdy.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 08/477,704

Art Unit: 3747

6. Claims 220, 227, 229, 231, 287, 288, 318, and 347 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gould.

Gould discloses a rotary engine with a rotatable piston at 41 with a projection at 21 and a cylinder. The piston comprises a plurality of portions secured by bolts 43 which are under tension. However, the features of an egr system, hollow bolts, and the mere inclusion of any pump are all elements common to engines and as such would have been obvious to one of ordinary skill in the art to provide them.

7. Claims 227, 246, and 252 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith.

To include an egr system and air filtering material in Smith for their desired functions would have been obvious to one of ordinary skill in the art.

8. Claims 220, 227, 249, 255, 261, 281, 282, 329, and 332 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brown in view of Arney and Berger.

Brown shows an engine comprising bolts under tension for a cylinder assembly, toriodal combustion chambers, and an exhaust passage near 40. However, there is no egr system, hollow bolts, rotating/reciprocating piston, and partially surrounding volume with catalytic filamentary material.

Arney teaches the recited rotating/reciprocating piston mechanism at 45. Berger teaches filamentary catalytic material at 43 in an exhaust system. It would have been obvious to one of ordinary skill in the art to modify Brown to use a reciprocating/rotating piston mechanism as

Application/Control Number: 08/477,704

Art Unit: 3747

taught by Arney and a filamentary catalytic material in an exhaust system which would then form a partially surrounding volume as taught by Berger. The use of an egr system to reduce pollution is well known and to use hollow bolts to reduce weight would be an obvious expedient.

9. Claims 220, 227, 229, 234, 237, 329, and 332 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arney in view of Waeber.

It would have been obvious to one of ordinary skill in the art to gang a plurality of the engines shown by Arney to a single output shaft as taught by Waeber for increased power. In regard to claim 237, the "special means" is so broad as to read on a shared exhaust system.

The use of egr systems to reduce pollution is notoriously well known.

- 10. Claims 264, 267, 335 and 338 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gould as applied to claims 220, 224 and 227 above, and further in view of Nallinger.

 To include an insulative housing around Gould as taught by Nallinger at 10 to reduce noise would have been obvious to one of ordinary skill in the art.
- Claims 270, 273, 291, 294, 297, and 300 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gould as applied to claims 220 and 227 above, and further in view of Goldsborough. To make the piston and cylinder of Gould from ceramic to increase thermal efficiency would have been obvious to one of ordinary skill in the art as taught by Goldsborough. The electric circuit reads on a common spark plug.

Art Unit: 3747

Allowable Subject Matter

12. Claim 258 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

13. Claims 303, 306, 309, 312, and 315 are withdrawn from consideration because the claims from which they depend have not been elected.

Conclusion

14. The examiner does not understand what broad inventive concept the applicant is trying to claim. The claims set forth well known elements (i.e. egr systems, rotating/reciprocating pistons, ceramic parts) in various combinations and permutations. What, precisely, is applicant trying to improve upon over the prior art?

Inquiries concerning the examiner's action should be directed to Noah Kamen at (703) 308-1945. The supervisory examiner, Henry Yuen, can be called at 308-1946. Fax is 308-7766. Questions of a general nature concerning the application should be directed to the group receptionist at 308-0861.
